Summary

BS Computer Science graduate from the University of the Philippines Diliman with experience in SQL, Python, relational databases, and data-driven systems. Built projects involving data collection, cleaning, validation, database design, and backend development. Strong foundation in analyzing data, ensuring data quality, and communicating findings to technical and non-technical audiences.

Experience

Full-Stack Developer Intern (UP FLCD éLaan)

Jul 2024 — Aug 2024

Team of 5 | Client-Based Internship, Agile, SvelteKit, PostgreSQL, GitHub

- Partnered with a university department to digitize its booking operations, replacing manual processes with a web-based system.
- Collaborated directly with stakeholders to translate business requirements and workflows into database and application features.
- Designed a normalized PostgreSQL database schema with backend for storage, retrieval, and validation of booking records.
- Developed dynamic, validated form workflows in SvelteKit, integrating frontend inputs with backend endpoints.
- Implemented user roles and validation rules to ensure data integrity across different booking scenarios.
- Rapidly learned and applied Svelte, SvelteKit, and PostgreSQL to deliver a production-ready system within tight timelines.

Selected Projects

Social Media Misinformation Analysis (Misinfometrics)

Feb 2023 — Jul 2023

Team of 3 | Data Collection, Data Cleaning, Statistical Analysis, Technical Writing

- Collected and manually curated 30-40 Twitter posts related to misinformation surrounding a Scarborough Shoal issue.
- Performed manual sentiment labeling and data cleaning on over 50 posts through duplicate removal and missing-value handling.
- Assisted in preparing validated datasets for hypothesis testing by ensuring consistency and completeness of all records.
- Contributed to technical writing, research documentation, and presentation materials explaining the study methodology and statistical findings to technical and non-technical audiences.

Road-safety Mobile Application (Metrocycle 2.0)

Aug 2024 — Jul 2025

Team of 3 | Research Thesis, Technical Writing, C#, Android, GitHub

- Worked within a large existing codebase, independently learning system architecture and contributing new features.
- Led Android deployment, testing, debugging, and performance optimization efforts.
- Contributed to the ideation and technical documentation of research methodologies and interpretation of statistical findings.
- Presented the project findings to an international academic audience at the Workshop on Computation: Theory and Practice (WCTP 2025), communicating technical results in accessible language.
- Published the study after rigorous academic peer-review at the proceedings of WCTP 2025 in Hokkaido, Japan.

Collaborative Workspace Platform (SyncSpace)

May 2026

Team of 4 | Project Lead, GitHub, NextJS, Supabase, Vercel, Railway

- Designed a normalized relational database schema and backend architecture for a collaborative virtual workspace platform.
- Stepped up as the acting technical lead, managing meeting agendas, sprint goals, and ensuring cross-functional task alignment.
- Developed backend functions and data-access layers using Supabase and PostgreSQL to transform and synchronize handled data.
- Owned the multi-platform deployment: configuring Vercel for frontend and orchestrating backend on Railway environments.

QR-Based Class Attendance Mobile Application (RollCall)

Sep 2023 — Jun 2024

Team of 5 | Full-Stack Mobile App, Agile Development, Ionic React, Supabase, GitHub

- Developed a mobile application that automates classroom attendance through QR code scanning and session validation.
- Implemented backend services using Supabase for authentication, attendance records, and course data.
- Designed relational database schema and validation rules to ensure accuracy, integrity, and consistency across attendance records.

Skills

- Languages:** Python, SQL, TypeScript, JavaScript, C#, C
- Databases & Data:** PostgreSQL, MySQL, Supabase, Relational Database Design & Normalization, Data Validation, Data Modeling, Technical Documentation
- Frameworks & Tools:** SvelteKit, React, NextJS, Ionic React, NodeJS, Git/GitHub, Playwright

Education

Bachelor of Science in Computer Science

Aug 2022 — Jul 2026

University of the Philippines - Diliman

- 1.68 GWA | Cum Laude equivalent | Department of Science & Technology (DOST) Merit Scholar
