

Cedric Legara — Software Developer | Full-Stack & Game Development

legara.connect@gmail.com | [+639192432123](tel:+639192432123) | [github:shankencedric](https://github.com/shankencedric) | [linkedin:shankencedric](https://linkedin.com/in/shankencedric) | [games:linktr.ee/legara.connect](https://games.linktr.ee/legara.connect)

Summary

Graduate BS Computer Science student from the University of the Philippines Diliman with hands-on experience building full-stack web applications, mobile software, and video games. Proven ability to learn unfamiliar tools quickly, take ownership of backend and gameplay systems, and deliver maintainable products in team-based and client-facing environments. Strong foundation in scalable system design, rapid prototyping, and end-to-end development from architecture to user experience.

Experience

Mobile Game Designer & Developer (Metrocycle 2.0)

Aug 2024 — Jul 2025

Team of 3 | Undergraduate Thesis Project, Unity 3D, C#, Android, GitHub

- Collaborated with 2 teammates to expand Metrocycle, a motorcycle road-safety game originally built for web.
- Took ownership of a large existing codebase, learning its architecture independently to build for scalability and maintainability.
- Led the Android porting effort, debugging broken systems and optimizing performance for mobile devices.
- Implemented gameplay systems including avatar customization, modular minigames, weather effects, and localization.
- Contributed UI/UX improvements for accessibility and clearer educational delivery.
- Documented development decisions and system behavior to support future maintenance and iteration.
- Presented at the Workshop on Computation: Theory and Practice (WCTP) 2025 in Hokkaido, Japan, and published the technical architecture and findings in the conference proceedings (Atlantis Press) following rigorous academic peer review.

Full-Stack Developer Intern (UP FLCD éLaan)

Jul 2024 — Aug 2024

Team of 5 | Client-Based Internship, Agile, SvelteKit, PostgreSQL, GitHub

- Initiated and executed a freelance-style internship with a university department to digitize its booking workflow.
- Co-led agile development through sprint planning, task coordination, and regular client check-ins.
- Architected and implemented the core backend system, starting from a normalized PostgreSQL database schema.
- Developed dynamic, validated form workflows in SvelteKit, integrating frontend inputs with backend endpoints.
- Built role-based booking flows to support different user types and request scenarios.
- Rapidly learned and applied Svelte, SvelteKit, and PostgreSQL to deliver a production-ready system within tight timelines.

Selected Projects

Virtual Workspace with AI Transcription (SyncSpace)

May 2026

Team of 4 | Project Lead, GitHub, NextJS, Supabase, Vercel, Railway

- Conceptualized and co-developed a virtualized spatial office platform integrated with automated AI meeting transcriptions.
- Stepped up as the acting technical lead, managing meeting agendas, sprint goals, and ensuring cross-functional task alignment.
- Architected the system's ERD and implemented the Supabase backend infrastructure, handling relational database design, user authentication, and Google OAuth integration.
- Developed custom Supabase backend functions and modular endpoint logic to bridge frontend UI states with real-time data.
- Owned the project's multi-platform deployment topology, configuring continuous delivery pipelines on Vercel for the frontend and orchestrating independent backend call microservices on Railway hosting environments.

QR-Based Class Attendance Mobile Application (RollCall)

Sep 2023 — Jun 2024

Team of 5 | Full-Stack Mobile App, Agile Development, Ionic React, Supabase, GitHub

- Developed a mobile application that automates classroom attendance through QR code scanning and session validation.
- Implemented backend services using Supabase for authentication, attendance records, and course data.
- Designed relational database structures and validation rules to prevent duplicate or invalid attendance logs.
- Integrated frontend components with backend services to provide real-time attendance feedback.
- Worked in an agile environment with weekly standups and iterative improvements based on client feedback.

Skills

- **Programming Languages:** C, C#, Python, TypeScript, JavaScript
- **Web Development:** React (Ionic React, React Native, NextJS), Svelte & SvelteKit; MySQL, PostgreSQL, Supabase, NodeJS
- **Development Practices:** Version Control (Git, GitHub), Agile Methodology, Documentation

Education

Bachelor of Science in Computer Science

Aug 2022 — Jun 2026

University of the Philippines - Diliman

- 1.68 GWA | Cum Laude equivalent | Department of Science & Technology (DOST) Merit Scholar
