

Cedric Legara — Software Engineer | AI & Full-Stack Development

legara.connect@gmail.com | [+639192432123](tel:+639192432123) | [github:shankencedric](https://github.com/shankencedric) | [linkedin:shankencedric](https://linkedin.com/in/shankencedric) | [games:linktr.ee/legara.connect](https://games.linktr.ee/legara.connect)

Summary

BS Computer Science graduate from the University of the Philippines Diliman with hands-on experience building full-stack web applications, mobile software, and video games, leveraging AI-assisted tools for rapid, documented software delivery. Proven ability to learn unfamiliar tools quickly, take ownership of systems design, and deliver maintainable products in team-based and client-facing environments. Strong foundation in scalable systems, rapid prototyping, and end-to-end development.

Experience

Mobile Game Designer & Developer (Metrocycle 2.0)

Aug 2024 — Jul 2025

Team of 3 | Undergraduate Thesis Project, Unity 3D, C#, Android, GitHub

- Collaborated with 2 teammates to expand Metrocycle, a motorcycle road-safety game originally built for web.
- Took ownership of a large existing codebase, learning its architecture independently to build for scalability and maintainability.
- Led the Android porting effort, debugging broken systems and optimizing performance for mobile devices.
- Implemented gameplay systems including avatar customization, modular minigames, weather effects, and localization.
- Contributed UI/UX improvements for accessibility and clearer educational delivery.
- Documented development decisions and system behavior to support future maintenance and iteration.
- Presented at the Workshop on Computation: Theory and Practice (WCTP) 2025 in Hokkaido, Japan, and published the technical architecture and findings in the conference proceedings (Atlantis Press) following rigorous academic peer review.

Full-Stack Developer Intern (UP FLCD éLaan)

Jul 2024 — Aug 2024

Team of 5 | Client-Based Internship, Agile, SvelteKit, PostgreSQL, GitHub

- Initiated and executed a freelance-style internship with a university department to digitize its booking workflow.
- Co-led agile development through sprint planning, task coordination, and regular client check-ins.
- Architected and implemented the core backend system, starting from a normalized PostgreSQL database schema.
- Developed dynamic, validated form workflows in SvelteKit, integrating frontend inputs with backend endpoints.
- Built role-based booking flows to support different user types and request scenarios.
- Rapidly learned and applied Svelte, SvelteKit, and PostgreSQL to deliver a production-ready system within tight timelines.

Selected Projects

Web Wrapper with Widgets for iOS & CarPlay (LiveLyrics)

Aug 2026 — Present

Sole Developer | React Native, Swift, Objective-C, WidgetKit, Expo, GitHub

- Directed Gemini 3.6 Flash to rapidly prototype, debug, and ship an end-to-end iOS application within a single week.
- Architected a music web wrapper delivering real-time synced lyrics across iOS Home Screen, Lock Screen, and CarPlay widgets.
- Orchestrated React Native to WidgetKit IPC using AI-assisted Swift and Objective-C bridges to shared UserDefaults.
- Designed real-time DOM lyrics scraping, LRC parsing, and background playback pipelines to maintain functionalities upon lock.
- Managed Expo prebuild workflows, target entitlement capabilities, and documentation for physical iPhone deployment.

Virtual Workspace with AI Transcription (SyncSpace)

May 2026

Team of 4 | Project Lead, GitHub, NextJS, Supabase, Vercel, Railway

- Conceptualized and co-developed a virtualized spatial office platform integrated with automated AI meeting transcriptions.
- Stepped up as the acting technical lead, managing meeting agendas, sprint goals, and ensuring cross-functional task alignment.
- Architected the system's ERD and implemented the Supabase backend infrastructure, handling relational database design, user authentication, and Google OAuth integration.
- Developed custom Supabase backend functions and modular endpoint logic to bridge frontend UI states with real-time data.
- Owned the project's multi-platform deployment topology, configuring continuous delivery pipelines on Vercel for the frontend and orchestrating independent backend call microservices on Railway hosting environments.

Skills

- **Programming Languages:** C, C#, Python, TypeScript, JavaScript
- **Web & App Development:** React, NextJS, SvelteKit, Swift; Playwright; MySQL, PostgreSQL, Supabase, NodeJS
- **Development Practices:** Version Control (Git, GitHub), Agile Methodology, Documentation

Education

Bachelor of Science in Computer Science

Aug 2022 — Jun 2026

University of the Philippines - Diliman

- 1.68 GWA | Cum Laude equivalent | Department of Science & Technology (DOST) Merit Scholar
