

# Cedric Legara — Software Engineer | AI & Full-Stack Development

[legara.connect@gmail.com](mailto:legara.connect@gmail.com) | [+639192432123](tel:+639192432123) | [github:shankencedric](https://github.com/shankencedric) | [linkedin:shankencedric](https://linkedin.com/in/shankencedric)

## Summary

BS Computer Science graduate from the University of the Philippines Diliman with a track record of building full-stack applications, leveraging AI-assisted tools for rapid, documented software delivery. Experienced in architecting scalable relational databases and launching end-to-end systems while shipping clean, maintainable code. Proven ability to rapidly adapt to unfamiliar tech stacks on-demand, work in agile teams, communicate with stakeholders, and translate complex requirements to user-facing interfaces.

## Experience

### Full-Stack Developer Intern ( UP FLCD éLaan )

Jul 2024 — Aug 2024

Team of 5 | Client-based Internship, Agile, GitHub, SvelteKit, Supabase

- Initiated and executed a freelance-style internship with a university department to digitize its booking workflow.
- Led the agile development process, facilitating sprint planning, task allocation, and regular client check-ins.
- Architected and implemented the core backend system, starting from a normalized PostgreSQL database schema.
- Developed dynamic, multi-step multi-role reservation forms using SvelteKit server actions, implementing strict server-side validation to ensure clean data entry before database insertion.
- Implemented role-based booking flows and data handling to support multiple user types and booking scenarios.
- Rapidly learned and applied Svelte, SvelteKit, and PostgreSQL to deliver a production-ready system within tight timelines.

## Selected Projects

### Web Wrapper with Widgets for iOS & CarPlay ( LiveLyrics )

Aug 2026 — Present

Sole Developer | React Native, Swift, Objective-C, WidgetKit, Expo, GitHub

- Directed Gemini 3.6 Flash to rapidly prototype, debug, and ship an end-to-end iOS application within a single week.
- Architected a music web wrapper delivering real-time synced lyrics across iOS Home Screen, Lock Screen, and CarPlay widgets.
- Orchestrated React Native to WidgetKit IPC using AI-assisted Swift and Objective-C bridges to shared UserDefaults.
- Designed real-time DOM lyrics scraping, LRC parsing, and background playback pipelines to maintain functionalities upon lock.
- Managed Expo prebuild workflows, target entitlement capabilities, and documentation for physical iPhone deployment.

### Virtual Workspace with AI Transcription ( SyncSpace )

May 2026

Team of 4 | Project Lead, GitHub, Next.js, Supabase, Vercel, Railway

- Conceptualized and co-developed a virtualized spatial office platform integrated with automated AI meeting transcriptions.
- Stepped up as the acting technical lead, managing meeting agendas, sprint goals, and ensuring cross-functional task alignment.
- Architected the system's ERD and implemented the Supabase backend infrastructure, handling relational database design, user authentication, and Google OAuth integration.
- Developed custom Supabase backend functions and modular endpoint logic to bridge frontend UI states with real-time data.
- Owned the project's multi-platform deployment topology, configuring continuous delivery pipelines on Vercel for the frontend and orchestrating independent backend call microservices on Railway hosting environments.

### IoT Web Companion Application ( Labuddy )

Feb 2024 — Jun 2024

Team of 6 | Backend Lead, IoT Integration, Product Pitch, GitHub, Supabase, React Native

- Led backend development for an IoT-enabled laundry sorting system with a real-time web companion app.
- Designed and implemented a scalable database using Supabase and PostgreSQL to manage device data and user accounts.
- Engineered the Supabase data access layer, writing optimized database functions and real-time listeners to instantly sync asynchronous laundry hardware signals with the React Native client state.
- Developed frontend forms and iterated on UX flow to ensure intuitive interaction between users and IoT hardware.
- Presented the system in a Dragon's Den-style pitch, communicating technical feasibility and product value to evaluators.

## Skills

- **Programming Languages:** TypeScript, JavaScript, Python, C, C#
- **Frontend Development:** Next.js, React (Ionic React, React Native), Svelte, SvelteKit, HTML, CSS
- **Backend & Databases:** Supabase, PostgreSQL, MySQL, Playwright, Authentication, REST & RPC API Integration
- **Cloud & Infrastructure:** Vercel, Railway, Git, GitHub, VS Code, Figma, Agile Methodology, Software Documentation, Debugging

## Education

### Bachelor of Science in Computer Science

Aug 2022 — Jul 2026

University of the Philippines Diliman

- GWA: 1.68 (Cum Laude equivalent) | Department of Science & Technology (DOST) Merit Scholar
